# Anuj Chourasiya

Backend Developer
9039941732 achourasiyaanuj@gmail.com https://github.com/Anuj-code-AI
https://www.linkedin.com/in/anujchourasiya

## PROFESSIONAL SUMMARY

Backend Developer skilled in Java, Spring Boot, and Spring Security, with hands-on experience building secure REST APIs using JWT and OAuth 2.0 authentication, and developing distributed systems with service discovery, API gateways, load balancing, and horizontal scaling. Experienced in Redis-based job queues, fault-tolerant architecture, Docker containerization, and CI/CD pipelines using GitHub Actions. Currently expanding expertise in Spring AI and cloud technologies.

## Technical Skills

**Programming Languages**: Java, SQL, Python
**Backend & Frameworks**: Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs, JWT, OAuth 2.0
**Distributed Systems & Architecture**: Microservices, Service Discovery (Eureka), API Gateway, Load Balancing, Distributed Job Scheduling, Fault Tolerance, Retry Mechanisms, Horizontal Scaling
**Databases & Caching**: PostgreSQL, MySQL, Redis
**DevOps & Monitoring**: Docker, Docker Compose, GitHub Actions, CI/CD Pipelines
**Developer Tools**: Git, GitHub, IntelliJ IDEA, Postman, Maven, Swagger/OpenAPI
**Core Concepts**: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), DBMS, Operating Systems, Computer Networks, HTTP, RESTful API Design

## Projects

**CampusHive** | Spring Boot, Spring Security, MySQL, JWT, OAuth 2.0 Docker, Microservices **April 2026 – July 2026**

- Developed a multi-university event management platform enabling event creation, ticket booking, and student community engagement across universities.
- Built secure REST APIs with Spring Security, JWT, and OAuth 2.0, implementing role-based authorization, pagination, and input validation across 70+ endpoints.
- Architected the backend using a microservices pattern with Eureka-based service discovery and centralized API Gateway for request routing and auth enforcement.
- Containerized 9 services with Docker and Docker Compose, supporting isolated, independently deployable service instances.

**Distributed Job Scheduling** | Spring Boot, Redis, Resilience4j, Eureka **July 2026 – August 2026**

- Built a fault-tolerant distributed job scheduler for reliable asynchronous task execution across horizontally scaled worker instances.
- Implemented atomic database-level job claiming to eliminate race conditions across workers, with exponential backoff retries and a dead-letter queue for permanently failed jobs.
- Designed REST APIs for job submission, execution, cancellation, and status tracking, exposed through a centralized API Gateway with Eureka-based service discovery.
- Applied Resilience4j Circuit Breaker and Retry patterns to handle Redis failures gracefully, with fallback logic to prevent job loss during outages.

## Certifications

- Spring Boot - Udemy
- Analytical Thinking and Logical Reasoning - Board Infinity

## Education

**Medicaps University** **Aug,2024 – Present**
*Bachelor of Technology in Information Technology* *Indore, Madhya Pradesh*

## Achievements

- Solved 320+ DSA problems on LeetCode.
